Sequence 2. Application US/09720278A

Sequence 2. Application US/09720278A

GENERAL INFORMATION:

APPLICANT: Swart, Pieter Jacob

APPLICANT: Warth Rujers, Maria Elizabeth

APPLICANT: Majers, Maria Elizabeth

APPLICANT: Hageman, Robert Johan Joseph

APPLICANT: Hageman, Robert Johan Joseph

APPLICANT: Van Den Berg, Jeroen Johannes Maria

TITLE OF INVENTION: Pharmaceutical preparations for use in combatting or

TITLE OF INVENTION: Preventing surface infections caused by microorganisms

FILE REFERENCE: 702-00214

CURRENT FILING DATE: 2001-05-24

PRIOR FILING DATE: 1999-06-28

PRIOR FILING DATE: 1999-11-06

PRIOR PAPLICATION NUMBER: NL 1010284

PRIOR FILING DATE: 1998-11-06

Patent No. 5770377
GENERAL INFORMATION:
APPLICANT: Picksley, Steven M.
APPLICANT: Lane, David P.
TITLE OF INVENTION: Interruption of Binding of MDM2 and P53
TITLE OF INVENTION: Protein and Therapeutic Application Thereof NUMBER OF SEQUENCES: 50
CORRESPONDENCE ADDRESS:
ADDRESSER: Flahr, Hobbach, Test, Albritton & Herbert STREET: Four Embarcadero Center, Suite 3400
CITY: San Francisco
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GENERAL INFORMATION:

Sequence 4, Application US/09035686
Patent No. 6153391
GENERAL INFORMATION:
APPLICANT: Dicksley, Steven M.
APPLICANT: Lane, David P.
TITLE OF INVENTION: Interruption of Binding of MDM2 and P53
TITLE OF INVENTION: Protein and Therapeutic Application Thereof
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          82.6%; Score 19; DB 1; Length 5; 80.0%; Pred. Sequence 5, Application US/09035686

Fatent No. 615391

GENERAL INFORMATION:

APPLICANT: Lane, David P.

ITILE OF INVENTION: Interruption of Binding of MDM2 and P53

TITLE OF INVENTION: Protein and Therapeutic Application Thereof

CORRESPONDENCES: 50

CORRESPONDENCE ADDRESS:

ADDRESSEE: Flehr, Hobbach, Test, Albritton & Herbert

STREET: Four Embarcadero Center, Suite 3400

CITY: San Francisco

STATE: California

COUNTRY: United States

ZIP: 9411-4187

COMPUTER READABLE FORM:

Sequence 9, Application US/09208277;
Patent No. 6166177
GENERAL INFORMATION:
APPLICANT: Probst, Peter
APPLICANT: Skeiky, Yasir A.W.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR THE TREATMENT AND DIAGNOSIS
Sequence 14, Application US/08530342A
Patent No. 6143275
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: HIGER, CHRISTOPH-STEPH
APPLICANT: SCHIER, HANS-MARTIN
TITLE OF INVENTION: ACTIVE ISOTOPES, THEIR METAL COMPLEXES
TITLE OF INVENTION: TYPE S3N2 CHELATORS FOR RADIO
TITLE OF INVENTION: ACTIVE ISOTOPES, THEIR METAL COMPLEXES
NUMBER OF INVENTION: THEIR DIAGNOSTIC AND THERAPEUTICAL USE
NUMBER OF SEQUENCES: 15
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .;

US-08-373-911-5
Sequence 5, Application US/08373911
Patent No. 5663296
GENERAL INFORMATION:
APPLICANT: Doherty, Annette M.
TAPLICANT: Kornberg, Brian E.
APPLICANT: Nikam, Sham S.
TITLE OF INVENTION: Hydroxamate Inhibitors of
TITLE OF INVENTION: Endothecin Converting Enzyme
NUMBER OF SEQUENCES: 16
CORRESPONDENCES. 16
CORRESPONDENCE ADDRESS:
                Parent No. 5550110
GENERAL INFORMATION:
APPLICANT: Cody, Wayne L.
APPLICANT: Topliss, John G.
TILE OF INVENTION: Endothelin Antagonists II
NUMBER OF SEQUENCES: 64
CORRESPONDENCE ADDRESS:
ADDRESSEB: Warner-Lambert Company
STREET: 2800 Plymouth Rd.
                                                                                                                                                                                                                                                                                                                                                                                                                                 SOFTWARE: Patentin Release #1.0, Ver. #1.25

Patent No. 595579

GENERAL INFORMATION:
APPLICANT: Leonard, James N. Montminy, Marc R.
TITLE OF INVENTION: REGULATOR OF INSULIN GENE EXPRESSION
TITLE OF INVENTION: REGULATOR OF INSULIN GENE EXPRESSION
NUMBER OF SEQUENCES: 49
CORRESPONDENCE ADDRESS:
ADDRESSE: Klauber & Jackson
STREET: 411 Hackensack Avenue
CITY: Hackensack
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .;
